

Category	Description	Reviewers Comment	Action Taken by Reviewed Group
Build	Could you clone from Git and build using the README file?	Cloned, but cannot be built as there is hardware necessary.	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	The Python code looked very clean and well-organized to me, as I code primarily in Python now so I know what to look out for. However, the work was still hard for me to follow just because I have no expertise in the machine learning area and whatnot.	
Implementation	Is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see useful abstractions?	I'm not entirely sure how much cleaner it can be, as I do not understand their code entirely.	
Maintainability	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	There is no unit testing, but I'm not sure how easy it would be for them to validate with unit tests that the lunar machine learning works as intended unless the outputs can be asserted.	
Requirements	Does the code fulfill the requirements?	Yes, their code fulfills the requirements.	

Other	Are there other things that stand out that can be improved?	Not for me, since I really can't test it concurrently with the code.
